

In case of fire on your floor OR in the building,

- 1. Don't ignore the fire alarm even if you can't see fire or smell smoke.**
- 2. Evacuate the building using the stairs and NOT the elevators, if possible.**
- 3. Don't lock your front door behind you. The Fire Department has to check every unit on the floor reporting a fire. If your door is locked, they will need to forcibly open it. This slows them down and will cause damage for you to repair.**
